Commerce Department Academic Activity Conducted by Faculty

**Inauguration of the chamber of commerce board and Industry businessman
employment opportunities in commerce sector**

Report

Shri Sairaj Shikshan Pratishthan's Vishwalata Arts, Commerce and Science college Bhatgaon commerce Department had organized a guest lecture on Inauguration of the chamber of commerce board and Industry business and employment opportunities in commerce sector for the student of FY, SY, and TY Bachelor of commerce in Hall No.1 as on 19 October 2022.

The speaker for the lecturer was C.A.Rahul Bare who is currently working as a chartered accountant. Prof.Kadam D.K. Principal of vishwalata college facilitated C.A.Rahul Bare for the guest lecture. Prof.Akshay Bale lecturer in commerce department introduced the speaker and has given information about the program.

Policies, the development of the industrial sector operating at the international and domestic level is greatly encouraged. As a result, the importance of commerce and management education is increasing to a great extent. High and low level employment opportunities are available. The demand for skilled employees is increasing.

Generally Commerce students tend to pursue B.Com. Apart from (degree) education, Company Secretary (CS), Chartered Accountant (CA), Cost Accountant (ICWA), Law, Competitive Examination (UPSC, MPSC). But many students who are not interested in science subjects or do not have more than 45% marks prefer commerce education. But in the current situation is considerable a big change in this attitude and the best opportunities in commerce faculty are being seen from this point of view. Because the students of this versatile branch include all aspects of marketing, finance, management, HR, career, accounts, audit, business taxation, trade, communication, costing, which are required in terms of business, these be beneficial in terms of making a general career. As a result, number of opportunities are available to perspective students. Apart from the above traditional courses, the following courses are also available to these students.

BBA Courses Along with education in the traditional commerce branch, degree courses like BBA, BBA (Computer Application), BBA (IB) have been started by Savitribai Phule Pune University under the Faculty of Commerce. These courses have been started with the aim of gaining practical knowledge in the professional world and providing employment opportunities on a large scale professionally. A student from any faculty who has passed 12th can be eligible for these courses. According to the order of Savitribai Phule Pune University, a student has to appear for college level Common Entrance Test (CET) for admission to BBA, BBA (Computer Application), BBA (IB) courses.

Due to the globalization and liberalization policies, the development of the industrial sector operating at the international and domestic level is greatly encouraged. As a result, the importance of commerce and management education is increasing to a great extent. High and low level opportunities are available. The demand of skilled employees is increasing.

C.A. Rahul Bare's session he has explained more understandable and simple concept for the participated students as well as teacher. It was followed by the interaction with the students there queries were addressed.

The session was very useful for the students as it helped them expand their knowledge of the scope of commerce and helped how to make the best use of it. The session concluded with Prof. Khairnar A.K, Prof. Sonawane C.S, Prof. Ghoderao P.J, Prof. Kotame P.H, Prof. Pande P.R. & Prof. More A.D. and Prof. Borade G. S. Proposing the vote of thanks...

POLLUTION

pollution occurs when any form of impurity is introduced into a clean source. it is most often in an environmental aspect like air, water pollution. There are mainly four types of pollution - air, water, soil and land.

pollution can come in 4 different types affecting different types of areas in the world. Air pollution affects the air, water pollution affects the water and marine life, land pollution affects the land destroying life and the environment and there is also noise pollution that can be affect our hearing.

pollution is dangerous. it effects everything from land to water, air, noise and more. Really pollution is just muck. Harmful substances causes by everything. pollution kills, so reduce it. china is the most polluted country in the world.

The four types of pollution are :

Air Pollution

Water pollution

Noise pollution

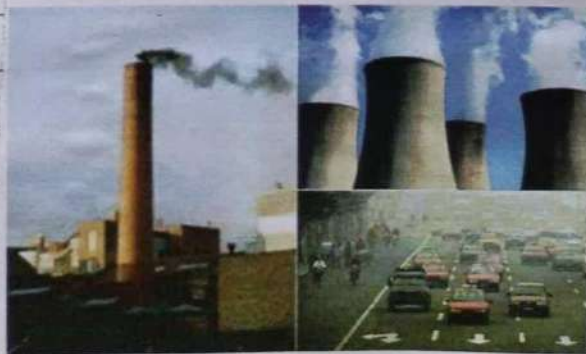

Land pollution

In the following pages, these types of pollution are Explained in Details.

Air pollution is the introduction of chemicals, particulate matter, or biological materials that cause harm or discomfort to humans or other living organisms, or cause damage to the natural environment or built environment, into the atmosphere.

Air pollution is known as a substance in the air that can cause harm to humans and the environment. Pollutants can be in the form of solid particles, liquid droplets, or gases. In addition, they may be natural or man-made. E.g. Sulphuric dioxide, smoke, fly ash.

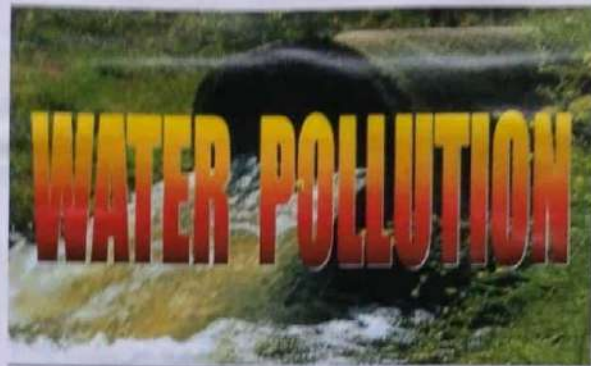

CAUSES

1. Carbon dioxide is one of the main pollutants that causes air pollution. This is because, although living beings do exhale carbon dioxide, this gas is harmful when emitted from other sources, which are caused due to human activity. An additional release of carbon dioxide happens due to various such activities. Scientists have now therefore identified carbon dioxide as one of the one of those elements that have contributed to global warming.

2. Carbon Monoxide is another such gas which although was present in the atmosphere earlier, is now considered to be a major pollutant. An excess of the same has a harmful effect on our system. There are many reasons why carbon monoxide can be released into the atmosphere as a result of human activities.

3. Sulfur dioxide is yet another harmful pollutant that causes air pollution. Sulfur dioxide is emitted largely to the exercise burning of fossil fuels, petroleum refineries, chemical and coal burning power plants etc. Nitrogen dioxide when combined with sulfur dioxide can even cause a harmful reaction in the atmosphere that can cause acid rain.

Water pollution is the contamination of water bodies (e.g. lakes, rivers, oceans and groundwater). Water pollution affects plants, and organisms living in those bodies of water and in almost all cases the effect is damaging not only a individual species and populations, but also to the natural biological communities.

Discharged of contamination and water that has been used for industrial purposes. The surface runoff from farms, construction sites or other impervious surfaces. The improper disposal of solid wastes like littering on a localized scale. Addition of excessive nutrients by runoff containing detergents or fertilizers called as Eutrophication.

CAUSES

There are several causes of water pollution.

1. organic
2. inorganic as well
3. municipal
4. industrial
5. agricultural

The cause of water pollution may be due to direct and indirect Containment Sources. The former are effluent outputs from refineries, factories, waste treatment plants. Fluids of differing qualities are emitted to the urban water supplies. However, still pollutants can be found in water bodies. Contaminants can also be divided into inorganic, organic, acid/base and radioactive. Uranium and thorium mining and scientific use are also contributive. Uran. Heat is a leading cause as it results in the death of several aquatic organisms. A discharge of cooling water by factories and power plants lowers the temperature of the water bodies. Oil pollution is very harmful for coastal wildlife.

EFFECTS

- 1) The food chain is damaged. When toxins are in the water, the toxins travel from the water to the animals that drink it, and then to humans when the animal's meat is eaten.
- 2) Diseases can spread via polluted water. Infectious diseases such as typhoid and cholera can be contracted from drinking contaminated water. This is called microbial water pollution. The human heart and kidneys can be adversely affected if polluted water is consumed regularly. Acid rain contains sulfate particles, which can harm fish or plant life in lakes and rivers.
- 3) Pollutants in the water will alter the overall chemistry of the water, causing changes in acidity, temperature, and conductivity. These factors all have an effect on marine life.
- 4) Altered water temperatures (due to human actions) can kill the marine life and affect the delicate ecological balance in bodies of water, especially lakes and rivers.

What is ECOSYSTEM ?

An ecosystem includes all of this living things (plants, animals and organisms) in a given area, interacting with each other, and also with their non-living environments (weather, earth, sun, soil, climate, atmosphere). Ecosystems are the foundations of the Biosphere and they determine the health of the entire earth system.

Ecosystems simply means
'ecologist systems'
Ecology is the study of ecosystems

In organisms ecosystem, each organism has its own role to play.

Consider a small puddle at the back of your home. In it, you may find all sorts of living things, from microorganisms to insects and plants. These may depend on non-living things like water, sunlight, turbulence in the puddle, temperature, atmospheric pressure and even nutrients in the water for life.

This very complex, wonderful interaction of living things and their environment, has been

the foundations of energy flow and recycle of Carbon and nitrogen.

Anytime a 'stranger' (living things) or external factor such as rise in temperature) is introduced to an ecosystem, it can be disastrous to that ecosystem. This is because the new organisms (or factor) can distort the neutral balance of the interaction and potentially harm to destroy the ecosystem.

Noise can be defined as unwanted and undesired sound. Decibel is the standard unit for measurement of sound. Usually 80 db is the level at which sound becomes physically painful. And can be termed as noise, humans, animals, plants and even inert objects like buildings and bridges have been victims of the increasing noise pollutions caused in the world. Be it human or machine-created, noise disrupts the activity and balance of life. While traffic is like the largest noise maker throughout of the world, there are many other to add it.

Causes

Traffic noise is the main source of noise pollution caused in urban areas. With the ever-increasing number of vehicles on road, the sound caused by the cars and exhaust systems of autos, trucks, buses and motorcycles is the chief reason for noise pollution.

People living beside railway stations put up with a lot of noise from locomotive engines, horns and whistles and switching and shunting operation in rail yards. This is one of the major sources of noise pollution. Though not a prime reason, industrial noise adds to the noise pollution. Machinery, motors and compressors used in the industries create a lot of noise which adds to the already detrimental state of noise pollution.

Plumbing, boilers, generators, air conditioners and fans create a lot of noise in the buildings and add to the prevailing noise pollution.

Household equipments such as vacuum cleaners, mixers and some kitchen appliances are noisemakers of the house. Though they do not cause too much of a problem, their effect cannot be neglected.

Effects

Deafness, temporary or permanent, is one of the most prevalent effects of noise pollution. Mechanics, locomotive drivers, telephone operators etc all have their hearing impairment.

Fatigue caused is another effect of noise. Due to lack of concentration, people need to devote more time to complete their task, which leads to tiredness and fatigue.

Noise pollution acts as a stress invigorator, increasing the stress levels among people.

Sometimes, being surrounded by too much of noise, people can be victims of certain diseases like blood pressure, mental illness, etc.

Noise pollution indirectly affects the vegetation. Plants require cool and peaceful environment to grow. Noise pollution causes poor quality of crops.

Animals are susceptible to noise pollution as well as it damages the nervous system of animals.

Noise indirectly weakens the efficacy of buildings, bridges and monuments. It creates waves which can be very dangerous and harmful and put the building in danger operations.

Land pollution is the action of environmental contamination with man-made waste on land. Americans generate five pounds of solid waste every day, furthermore creating one ton of solid waste each year. In an average day in the United States, people throw out 20,000 tons of edible food and throw 1 million bushels of litter out of their automobiles. The main human contributor to pollution at landfills. Approximately, half of our trash is disposed in landfills. Only 2% of our waste is actually recycled.

Causes

Increase in urbanization More Constructions mean increase in demand for raw materials like timber. This leads to the exploitation and destructions of forests. There is more demand for water.

Domestic Waste Every single day, tons and tons of domestic waste is dumped ranging from huge pieces of rubbish such as used refrigerator to fish bones. If all these wastes are not disposed to properly, the damage they can do to the environment and humankind can be devastating.

Agricultural activities Besides domestic waste, pesticides and herbicides used by farmers to increasing crops yields also pollute the land when they are washed into the soil.

Industrial activities industrial activities also are a contributing factor to land pollution. e.g, in open cast mining, huge holes are dug in the ground and these form dangerously deep mining pools. Heaps of mining waste are left behind and these waste often contain several poisonous substances that will contaminate the soil.

Effects

- 1) exterminates Wildlife
- 2) acid rain kills trees and other plants.
- 3) Vegetation that provides food and shelter is destroyed.
- 4) it can seriously disrupts the balance of nature, and in extreme causes, can cause human fatalities.
- 5) pesticides can damage crops, kills vegetation, and poison birds, animals and fish. Most pesticides kill or damage life forms other than those intended. For example, pesticides used in an effort to control or destroy undesirable vegetation and insects often destroy birds and small animals. Some life forms develop immunity to pesticides used to destroyed them.

Ozone Layer depression

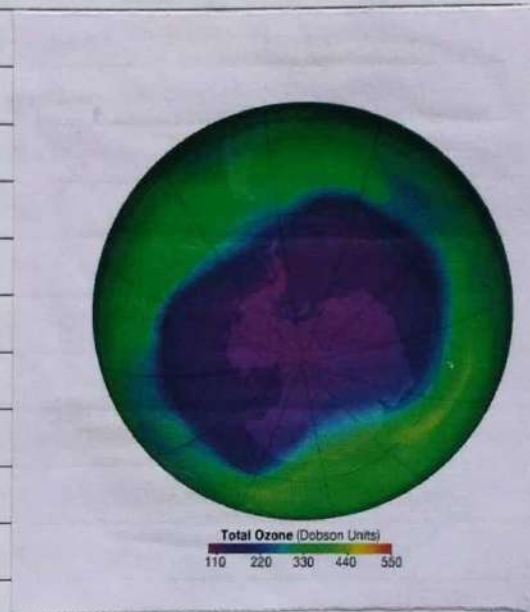

Compounds that contain chloride and bromide molecules, such as methyl chloroform, halons and chlorofluorocarbons (CFCs) are stable and have atmospheric lifetimes long enough to be transported by wind into the stratosphere. When these ozone-depleting substances (ODS) break down in the atmosphere, they release chlorine or bromine, which attack ozone. Each chlorine or bromine atom reacts with ozone repeatedly, with and breaking apart as many as 100,000 ozone molecules during its stratospheric life.

CFCs which have a long history of use as refrigerants, solvents, foam-blowing agents and in other applications, have been almost completely phased out worldwide. In addition, restrictions are now in place to phase out hydrochlorofluorocarbons (HCFCs), compounds used as substitutes for the more damaging CFCs. The U.S. will phase out HCFCs completely in 2030.

What is stratospheric ozone?

Ozone is a naturally occurring gas that can be good or bad for yourself and the environment depending on its location in the atmosphere. In the layer near the Earth

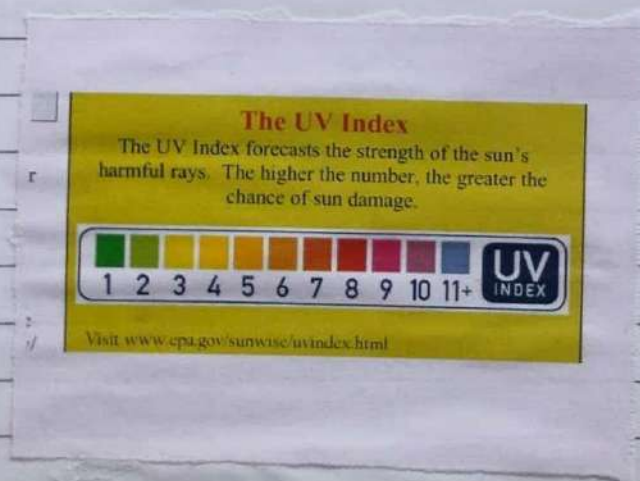

Surface - the troposphere - ground level - or "bad" ozone is an air pollution that is a key ingredient of urban smog. But higher up, in the stratosphere, "good" ozone protects life on Earth by absorbing some of the Sun's UV rays. An easy way to remember this is the phrase "good up high, bad nearby."

What is EPA Doing Layer About Ozone Depletion

- Ending the production, import and use of ODS, often ahead of the Montreal protocol schedule.
- Ensuring that ODS are recycled properly, and prohibiting unnecessary release of ODS;

- Identifying safe alternatives through the significant New Alternatives policy (SNAP) program.
- Banning the release of ozone-depleting refrigerants during the service, maintenance, and disposal of air conditioners and other refrigeration equipment.
- Requiring that manufacturers label products containing or made with the most harmful ODS.

Threats of ECOSYSTEMS

Anythings that attempts to alter the balance of the system. Some of these threats are not overly worrying as they may be naturally resolved provided the natural conditions are restored. other factors can destroy ecosystems and render all or some of its life forms extinct. Here as follows

1) Habitat Destruction

2) pollution

3) Overharvesting

4) UV Radiations

Five Basic Needs of living Things

Every living organisms on earth needs some basic things to survive. The amount, way, form or kind of these needs vary from organism to organism.

For example, water is basic needs for survival. The amount of water a frog needs to survive is not the same as the amount of water a desert cactus plant needs to survive. They all need water, but because they are different living organisms, their water needs will be different, even though they both need water to live.

➤ Sunlight -

This is probably the most important need for the all living organisms, because it is the source of all energy. It also provides heat for plants and animals.

➤ Water -

Water is the medium in which living cells and tissue works. Water is also a living environment for many plants and animals.

➤ Air -

Air is made up of several gases, but the two most important gases are oxygen, and carbon dioxide. Without oxygen, animals will die, and without carbon dioxide, plants cannot survive.

➤ Food (nutrients):

Living things need energy for function, energy is needed to grow, reproduce, move and to work. Think of what will happen if you stayed for three days without food.....

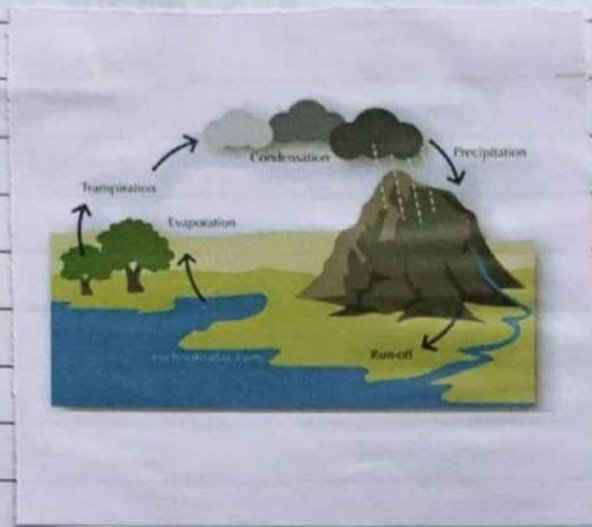

What is CYCLE ?

A cycle is something that never stops. it has no beginning and has no end. An example is the water cycle, where the water goes through a basic journey: rains fall all the ends up of in rivers, rivers ends in the sea, sea water evaporates and forms rain clouds, and the rains fall again. Other important cycles include the Carbon cycle, rock cycle and nitrogen cycle.

Hydrosphere

The hydrosphere includes all the water parts on the planet. it includes water on the surface, sub-surface and water vapour in the atmosphere. The hydrosphere and the atmosphere are known as the fluid spheres. These spheres are the liquid and gas components of the earth.

Think all of the water in oceans and seas, including all the frozen water and ice (Cryosphere). Also think of the lakes, lagoons, rivers and ponds, as well as water in water table beneath the surface of the earth.

The oceans and water bodies absorb the sun's energy and warm up. Transpiration by trees and Evaporation of surface water occurs. The water vapour in a atmosphere Condenses (condensation) to form rain clouds and comes down the (precipitation) The rains fall back and land into water bodies (run-off) again and they all run back into the ocean for the cycle to continue.

Biosphere

The biosphere is all living components of the earth (humans, plants, animals, bacteria, fungi, protists and all microscopic organisms on land, in the air and in the oceans) it also includes all organic matter that has not yet been decomposed. This living part is hugely dependent on the other three spheres.

This living part is hugly dependant on the other three spheres.

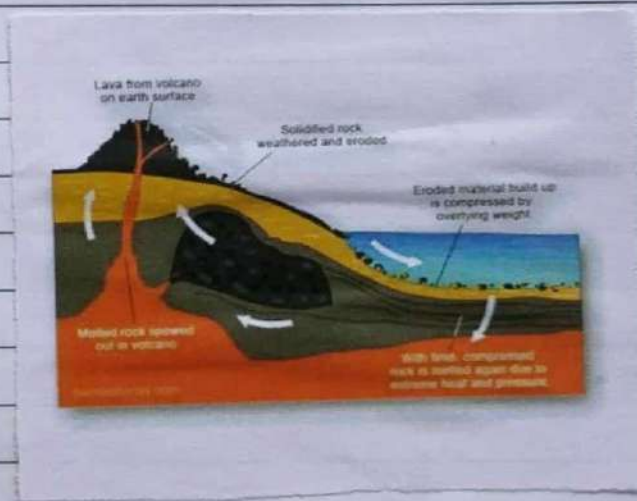

The hydrosphere provides moisture or water to plants and animals, the geosphere provides the solid surfaces on which animals and plants grow and also provides heat from the earth.

The intraction of the biosphere with other spheres can be explained better by a theory known as Ecosystems.

Geosphere

This sphere includes all the stuff that make up the crust and the core of the earth. it includes everything natural and lifeless that make up the surface of the earth.

Examples are all the rocks and sand particles from dry land to those found at the bottom of the oceans. they also include the mountains, minerals, lava and molten magma from beneath the earth's crust.

The geosphere undergoes infinite processes constantly and that in turn, modifies other spheres. One example of the continuous process is the rock cycle.

In this cycle, you will notice that it can take thousands of years for the cycle to complete, but every single day has a role to play. You will also notice that the cycle does not complete on its own. It is influenced by other factors such as water, temperature, and wind which also belong to other spheres.

Today 09th March 2023, 10th day of Dr.M.R.Jayakar Employability Skill Programme.Todays guest Session delivered by Prof.Gorakshnath Pawar. The topic was "Goal Setting" College Principal Prof.D.K.Kadam,Event coordinator Prof.Baviskar Rahul R., Science Department HOD Prof.Vrushali Gadekar, Faculty member-Prof.Amol More, also present this today session. Programme Coordinator Prof.Baviskar welcome to one and all.he introduced todays resource person. After Introduction Prof.Gorakshnath Pawar delivred his openion regarding Goal Setting .It include-

- 1) Defination Of Goal
- 2) Introduction Of Goal setting
- 3) Why setting Goal.
- 4) A Goal With out Plan is just wish
- 5) Type Of Goal
- 6) Smart Goal
- 7) How To Set Goal
- 8) Step to set a Goal
- 9) Inspirational story
- 10) Conclusion

Next, ,at the end of the session participated student asked their queries. resource person solved each and every queries and satisfied response given to the student. In Last, the session was end with vote of thanks by Prof. Borade Geeta.

Date : 10-03-2023

Research Person: Prof. More Amol

Today 10th March 2023, 11th day of Dr.M.R.Jayakar Employability Skill Programme. Today's guest session delivered by Prof. More Amol. The topic was “Bank Finance” College Principal Prof.D.K.Kadam, Event coordinator Prof.Baviskar Rahul R., Science Department HOD Prof. Vrushali Gadekar, Faculty member-Prof.Borade Geeta, also present, this today session. Programme Coordinator Prof.Baviskar welcome to one and all. He introduced today's resource person. After introduction Prof. More Amol delivered his opinion regarding Bank Finance. It includes-

- 1) Definition finance, History of Banking finance
- 2) Why do we need banks?
- 3) Type of bank
- 4) Bank interest Rate
- 5) Payment Bank 2015-Google pay, Phone Pay
- 6) Name of Bank Finance- Shriram Finance, Bajaj Finance, Mahendra Finance
- 7) Pradhan Matri Jan Dhan Yojna
- 8) Banking Sector-Private and Public Sector
- 9) RBI, Function of RBI
- 10) Mudra Loan, Feature of Mudra Loan

Next, at the end of the session participated student asked their queries. Resource person solved each and every query and satisfied response given to the student. In last, the session was ended with vote of thanks by Prof. Vrushali Gadekar.
