Project title : Atmospheric Water Generator

There is no water left on earth that is safe to drink without purification after 20-25 years from today .this is seemingly bold statement , but it is Unfortunately true. Only 1 % of earth's water is in a fresh ,liquid state and nearly all of this polluted by both diseases and toxic chemicals For this reason ,purification of water supplies is extremely important .keeping these things in mind, we have devised a model which will convert the dirty /saline water into pure/portable water using refrigeration effect atmospheric water generator. This is device which produces drinkable Water from humid air with an emphasis efficiency and renewable energy sources.

This project aims to solve this problem. In the coastal areas the relative humidity is quite high(around 70-80%).so the air in coastal areas can be used to meet the water need of people by using dehumidifier unit. Thus drinking water can be obtained from the atmosphere by Harnessing solar energy . such device name –“ Atmospheric Water Generator “

Key Point

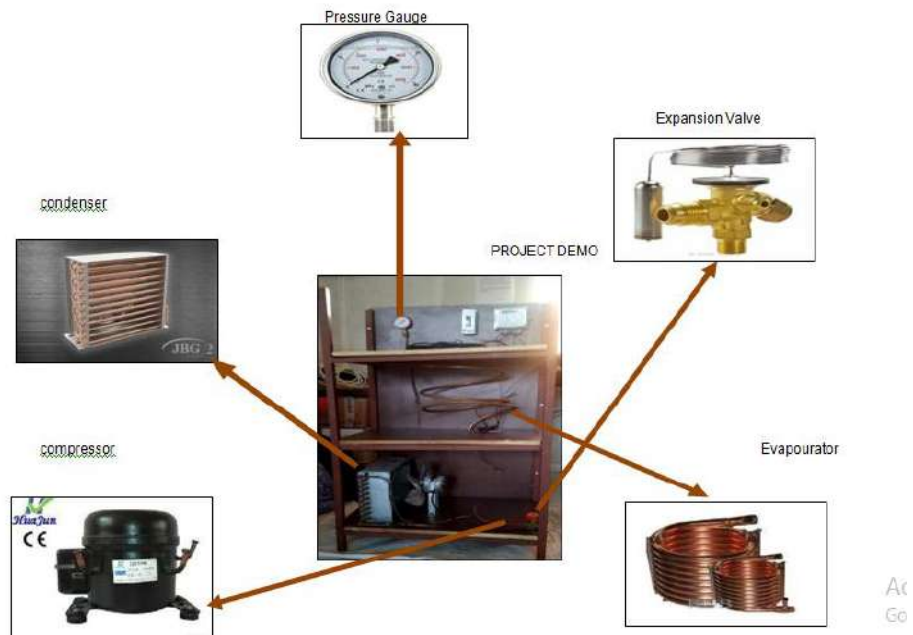

- Water Cycle
- Effect of Climate
- Refrigeration System
- Atmospheric Water Generator toolkit

Water Cycle	Water cycle also known as the hydrolic cycle or H ₂ O cycle. The water moves from one reservoir to another such as river to ocean or from ocean to the atmosphere, by the physical process of evaporation, the water Goes through liquid, solid(ICE), Gas (Vapour)...
Effect of Climate	The water cycle powered from solar energy, 80% global evaporation occurs from oceans. Without cooling the effect of evaporation lead to higher temperature 60 ° c. aquifer drawdown and pumping of fossil water increases the total amount of water in the hydrosphere
Refrigeration System	Refrigeration system classified in two parts <ul style="list-style-type: none"> - Vapor-compression refrigeration - Vapor-absorption refrigeration
Atmospheric Water Generator toolkit	This toolkit consist of – <ul style="list-style-type: none"> Compressor Condenser Expansion valve Pressure Gauge Evaporator
